

INFRA CONSTRUCTION - GENERAL

VERSATILE INFRA SERVICES UNDER THE SAME ROOF

Our infra services cover both new construction and maintenance in various projects.

We can provide the project with expert services for the entire life cycle of the project. Our service is adjusted to co-operate with the client's own organisation, and as an appropriate entity to ensure the best qualitative and economical result.

HTJ offers its infra project client a professional and competent organisation which manages the construction project according to the rules set together with the client. An infra project is usually a process where there are several owners of cabling and equipment, and other operators.

The strength of HTJ is versatile experience, and the company's quality concept includes active participation in infra industry development projects. In addition to traditional project management and supervision services, we can also offer various execution models where our competence is modified to meet the needs of the client organisation.
