

BUILDING CONSTRUCTION - GENERAL

Our services cover both new construction and renovation in all types of construction projects. We can provide the project with expert services for the entire life cycle of the building.

Our service will be adjusted in the optimum manner for the success of the project in order to achieve the best possible result in terms of time, quality and economy.

HTJ offers its client an expert and competent organisation which manages the construction project applying the authorisation agreed on together with the client.

HTJ's strength is its competent organisation of persons who offer technical competency, expertise in the industry's contract practices, and excellent cost awareness to conclude construction projects. In addition to traditional project management services we are also able to offer various construction management models for varying and even difficult market situations.

In the tightening market situation there is a need to shorten the execution times of construction projects, and to lower the costs. HTJ will help with finding the right project management and execution model. A project management model must be flexible, and it has to enable execution which corresponds in the best possible manner with each situation.
