

HTJ SITE SUPERVISION ^{INFRA}

Site supervision ensures that the contractors' work performance meets contractual requirements. Supervision material consists of plans, specifications, contracts and all documents created during the project. Technical supervision is primarily focused to the quality control of the required final product, but supervision can also cover all client's needs like work safety.

Professional and systematic site supervision ensures the quality of the desired end result.

Site supervision is carried out

- in accordance with the Scope of Work for Ground and Water Construction Work Site Supervision (RT 16-10466),
